Power-lift™ Stirrups

Infinite Leg Positioning. Precisely.

- Bariatric Power-lift Stirrups
- Adult Power-lift Stirrups
- Junior Power-lift Stirrups
- Pediatric Power-lift Stirrups

STERIS
Innovative STERIS surgical leg holders

The new series of STERIS Power-lift Stirrups incorporate all of the proven clinical benefits of booted style stirrups: maximum safety for the patient, ease of setup for your staff, impressive versatility, and optimal surgical site access.

Designed for safety and comfort

- **Ergonomic**: The leg holder boot is designed so that there is no pressure on the popliteal fossa or where the perineal nerve is superficial
- **Safe**: The boot is self-adjusting on the horizontal plane to reduce the potential of DVT and compartment syndrome
- **Comfortable**: Boot pads secure the ankles and feet in place

Free to move, without stress

- **Effortless**: A hidden lift-assist mechanism in the Adult and Bariatric models takes virtually all of the work out of positioning the legs
- **Simple**: A single handle controls all aspects of leg posturing (including flexion, extension, abduction, adduction, and rotation)
- **Easy**: Grip-and-twist control handles make positioning nearly effortless – just twist the handle to move the leg holder and release to secure it in place

Power-lift Stirrups allow you to position from high lithotomy to low lithotomy, as well as flexion/extension, ab/adduction, and rotation.
Superior surgical site access

- The control system’s pivot point helps ensure anatomically correct positioning by replicating the action of the hip
- Leg length indicators ensure precise bilateral positioning
- The control handle can be easily manipulated through the sterile drape for intra-procedural leg adjustment
