Steps:

1. Ensure the Ultrasonic Indicator Holders and Technician’s gloves are clean and dry.

2. Attach the indicator to the spring in the holder.

3. Attach holders in each corner and center of the tray (five total). Use the clip on the back of the holder to secure onto the tray.

4. Place the tray into the ultrasonic cleaner and run a five minute cycle.

5. Remove the holders and indicators after cycle completes.

6. Inspect the indicator for evidence of soil. Place the plastic film against a white background and compare the results to the examples to the right. Record results.
