Offering the precision and strength needed during foreign body retrieval...

**The Raptor® device:**
- combines alligator and rat tooth capabilities into one device, increasing the gripping ability for a stronger hold
- eliminates reprocessing and ensures the device performs consistently each time it is used
- operates in a retroflexed position and in side-viewing endoscopes

**NEW Raptor® grasping device - mini:**
- features a smaller hybrid jaw and catheter option for tight or torqued positions
- is specially designed for procedures requiring an ultra-slim endoscope
- offers the firm grip needed to retrieve smaller foreign bodies and stents

For more information on the Raptor® grasping device, contact US Endoscopy today.
