Raptor® grasping device
Offering the precision and strength needed during foreign body retrieval...

Raptor® grasping device

» combines alligator and rat tooth capabilities into one device, increasing the gripping ability for a stronger hold
» eliminates reprocessing and ensures the device performs consistently each time it’s used
» operates in a retroflexed position and in side-viewing endoscopes

Raptor grasping device - mini:

» features a smaller hybrid jaw and catheter option for tight or torqued positions
» specially designed for procedures requiring an ultra-slim endoscope
» offers the firm grip needed to retrieve foreign bodies and stents

For more information on the Raptor grasping device, contact STERIS Endoscopy today.
