

Chamber Cleaning with STERIS Service

Your trusted partner  
for better outcomes

**Maximize Steam Sterilizer Performance  
and Meet Regulatory Requirements**

# Clean Chambers improve the performance and extend the life of your sterilizer

An environmentally safe, automated process with minimal disruption, including off hours and weekends. We work around your schedule, providing maximum convenience.

## Why do sterilizer chambers need professional cleaning?

As your trusted partner for quality equipment, our experience in sterilization practices provides us with a unique understanding of sterilizer performance, the impact of accumulated minerals, and other contaminants on the sterilization process. These substances accumulate on chamber walls from the incoming steam and can build up, cause discoloration, hinder performance and even contaminate sterilized packs.

## A clean you can see

Our professional proprietary process is designed to remove the minerals and other contaminants to provide you with a clean chamber and to help you meet regulatory compliance for annual chamber cleaning.

# Safe, thorough, reliable and keeps you compliant

## See the difference. Stay compliant.

Steam sterilizers should be professionally cleaned annually. However, depending on your usage volume and the quality of your incoming steam, semi-annual or quarterly cleanings may be more appropriate (AORN and AAMI). When you use STERIS as part of your regular maintenance schedule, you can expect:

- Removal of most substances built up on chamber walls
- Improved drying and heat transfer within chamber walls
- Improved sterilizer chamber aesthetics
- Minimal disruption so adjacent equipment can be used during cleaning
- Reduced contamination and rejected packs
- Easier routine operator cleaning

# Safe and effective chamber cleaning... Easier. Faster. Safer.

## Our proprietary process optimizes cleaning with you in mind

We're in Sterile Processing Departments across the country every day, and that's why we've developed a process that works best for you. It's performed by technicians who specialize in this very service.

It starts with a manual prep scrubbing followed by a cleaning process using our Automated-Descaling and Passivation Cart\*. The chemical process is documented to be environmentally friendly using alkaline and acidic solutions.

With convenient hours that work around your schedule, we work with our Customers to minimize disruption during cleaning and return all equipment to service immediately afterward.

**Cleaning your chambers is worth doing regularly and worth doing correctly.  
Confidence and peace of mind are what result from our chamber cleaning service.**

**To request chamber cleaning service, contact  
your local STERIS Field Service Representative.**

\*The Automated-Descaling and Passivation Cart process is available for many sterilizers, however, not all. In some cases a complete manual cleaning service is required.
